

determining [providing] by said bridge server, in response to said received request, additional content [to the client system], in addition to the requested content to be provided to the client system by the network server; and

providing by said bridge server said determined additional content or an identifier of said additional content to said client system.

4. (Twice Amended) The method of claim 1, [further comprising] wherein said determining comprises checking by said bridge server whether additional content corresponding to said network server exists.

10. (deleted)

11. (Twice Amended) The method of claim [10] 1, wherein the identifier of the additional content comprises a Uniform Resource Locator (URL) corresponding to the additional content.

17. (Thrice Amended) The method of claim 1, wherein said providing comprises returning by said bridge server a HyperText Markup Language (HTML) page to the client system, wherein the HTML page includes [an] said identifier of the additional content for the client system to retrieve the additional content.

19. (Thrice Amended) A bridge server comprising:

control logic operative to receive a request for content from a client system targeting a network server, and to check, in response to said received request, whether additional content is to be provided to the client system, in addition to the requested content to be provided to the client system by the network server; and
